DETAILED ACTION

1. This is the initial Office action based on the 10/586,086 application filed on 06/04/2007. **Claim1**, as originally filled, are currently pending and have been considered below.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claim limitations of “90%” and “500ms” must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. **Claim 1** is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The examiner will interpret this to be equivalent to any time related function.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. **Claim 1** is rejected under 35 U.S.C. 103(a) as being unpatentable over Carney et al. (hereinafter Carney) US Patent No: 6,449,663 B1 and further in view of Sarkar et al. (hereinafter Sarkar) US Publication No.: 2003/0126282.

Carney teaches adjusting an interval of polling periods (Figure 2 and Abstract) and checking time data (Figure 2 and Abstract) and doing so in regards to performance information and statistical information (Figure 2 and Abstract).

Carney also teaches the shortening of polling intervals (Figure 2 and Abstract).

Carney fails to explicitly disclose wherein waiting for 90% of a polling period after requesting performance information and statistic information; checking time data every 500 ms after an elapse of the 90% of the polling period.

However **Sarkar** teaches 90% of a polling period after requesting performance information and statistic information; checking time data every 500 ms after an elapse of the 90% of the polling period (Par. 43 and 57-58).

It would have been obvious to one of ordinary skill in the art at the time of the present invention to modify the teachings of the cited reference because **Sarkar** would have allowed **Carney** to adjust the polling interval to check time data every 500ms upon 90% completion (Par. 42).

Examiner Note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.
